

Israel – The Scientific Horoscope of a Nation with Predictions for the 2006

Copyright © 2006 by Klaudio Zic, all rights reserved. <http://www.lulu.com/astrology>

It looks amazing that such a nation of excellent astrologers should pick such a bad day.

For some reason Israel picked not only the time when Saturn was near to Pluto, but also the hour when the Moon was there. The Moon is the people, especially when in Cancer.

The sickness got its name from the Moon Saturn conjunction in Cancer. Saturn Pluto is the aspect of the kamikaze, the Holocaust and slaughter: terrible aspect to have in any horoscope and most forbidding in the horoscope of a nation. Israel shall hardly be spared in a new Holocaust. Deucalion stands for Noah and a new flood. New potential planet 2003 EL61 spells continuous agitation and escalating violence to the bitter end. Wives are doomed to be of little consolation to their husbands.

The ascendant is Leo, a rather rare ascendant, very close to Sextans. Mars, Deucalion, 2003 EL61, Saturn, Pluto and the Moon make a cluster. Saturn is in Cancer, Phoebe including, thus the aspect of the Holocaust happens in Cancer; the nation is wounded.

Mars is with Regulus, Jesus Christ's star meaning "little king" or MIKAL the archangel.

The winged sphinx is associated with Saint Mark, Archangel Michael and ritual south.

Every Moon in Auriga this year is related to Israel's natal Venus, which is just below Auriga. May 1st 2006 may see a rather bloody Moon in Auriga since Mars is there.

Aphosis is at the Stargate with Uranus. This special object is scheduled for close approach or even impact in the years to come. The Stargate area is pregnant with power. Among the objects of interest we find giant transneptunian Orcus and Earth trojan moon 2002 AA29. Rhadamanthus is towering in judgement with large estate specialist 2002 AW197 and Asbolus the mage. Thus three objects figure in Auriga, the chariot of power.

Centaur 2005 TN74 is at the meridian. This new object represents secret priesthood as well as the nation's tendency to pay for peace. One tends toward an introspective life while being willing and able to raise one's family as well as to pay for peace of mind.

Jupiter is exactly at the Sagittarius Stargate, receiving Pluto's transits when it drops from Serpens and Ophiuchus and into Sagittarius. The Archangel protector is GBRIAL or Gabriel, since Antares in Scorpius is the cardinal Archangel (one of the ten) closest to the meridian, elated in the appropriate ninth house of the horoscope.

Moon in Auriga 2006

Moon in Auriga serves our prediction in the year 2006 much as Moon in Cetus marked all the major events in the year 2005. Auriga is a zodiacal IAU constellation after Orion.

The Moon can be both in Orion (11-9 WTC) as well as Auriga, while other astrologic planets can be in Orion; thus in the year 2007 we have Venus in Orion. Venus in Orion has been documented in our early publication on *Venus in Special Constellations*.

In the case of a planet in Cetus we elaborated on two distinct positions that we conveniently marked Cetus I and Cetus II. In the case of Moon in Auriga we can clearly distinguish two different positions, namely Moon at the Stargate and Moon conjunct star 49 Aurigae. The star Kappa Aurigae stands in between these two distinct positions.

The intersection point between the galactic equator and the ecliptic defines the Orion Stargate. That Orion is our galactic neighbor was known to our old civilizations who worshiped it while studying its precession and longer cycles. The Orion Stargate lies between Taurus and Gemini constellations as defined by the IAU. This point happens to lie just below Auriga constellation.

It is understandable that extreme positions of the Moon affect peculiar circumstances in the life cycle on planet Earth. As above so below. Auriga regulates automobile industry, but also computer industry since the two tend to blend. Auriga is about quick decision such as in formula one, tank battle and supercomputing. It is also about dislodging and exile. Neighboring Gemini has always been associated with binary calculus but also with war, Auriga takes the attributes of Gemini to extreme announcing a super technological war campaign with issuing refugees. The chariot of power becomes a modern tank geared with sophisticated computer technology operative in a sand storm as well as night battle.

When the Moon opposes Pluto in the year 2006, it does so from Taurus constellation, just below Auriga. Pluto hovers at the borders of Serpens, flirting with Ophiuchus constellation. The next opposition happens at 167.7 angular degrees on March 7th 2006.

The Moon's extreme position does not seem to bode well for world peace towards May 2006. Moon's entry into Auriga with Mars standing by and Pluto in opposition doesn't seem to portray a peaceful time. If we are unlucky to have a major a battle fighting, the celestial setting looks like the taking of a capital city. In formula one affairs as well as competitive automobile industry a major rival will largely triumph over three opponents.

Some of the major events that will portray the destiny of the planet besides Moon in Auriga are Jupiter's entry into Ophiuchus as well as Pluto's entry into Sagittarius. Pluto's position in Sagittarius is especially interesting as concern the Sagittarius Stargate where Jupiter is about to join after its journey through Ophiuchus. Venus

2006 Baghdad Bombing Map

Copyright © 2006 by Klaudio Zic, all rights reserved. <http://www.lulu.com/astrology>

Moon in Auriga with Mars on May 1st 2006 caught our attention in this hard time when Islam is provoked in order to be attacked. We wanted to keep a check on the Baghdad bombing map in order to determine the critical days for Islam and world at large.

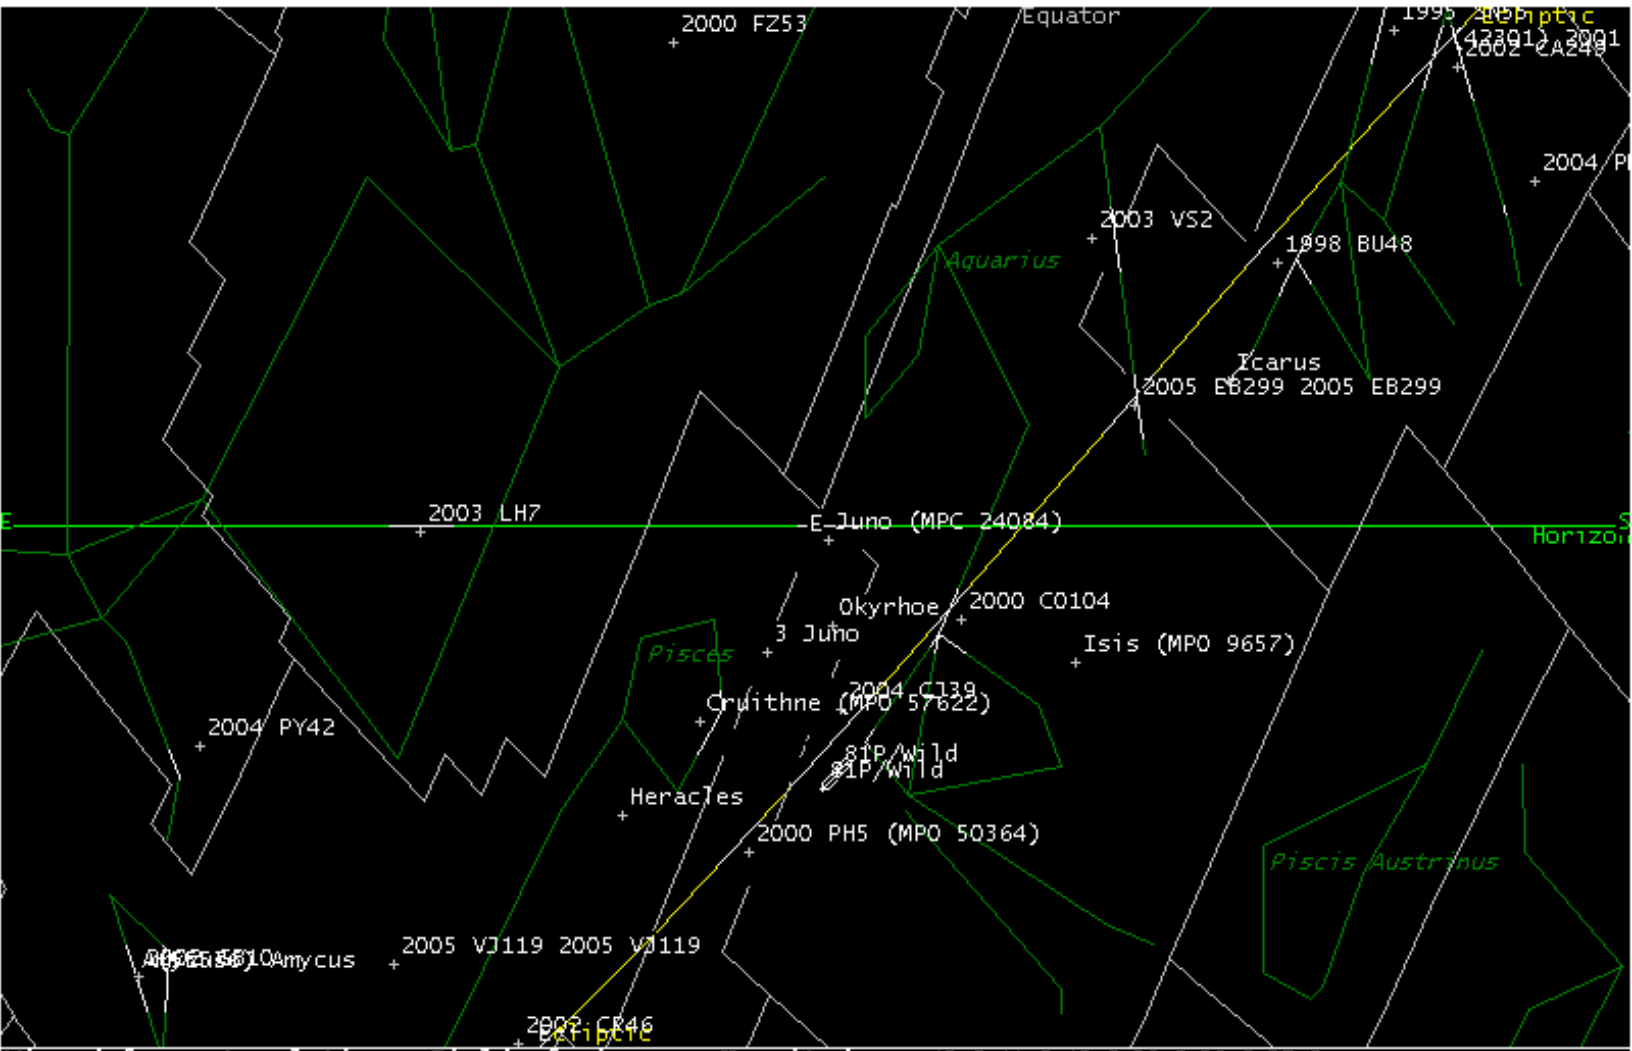

The Baghdad bombing map is an extremely sensitive astrological tool providing detailed troops movement already from the properly oriented wheel chart. Several points of interest can serve the astrologer's analysis.

1. Jupiter was in midst of Cancer constellation when the bombing happened. Besides Ara constellation prominent, Jupiter stands for places of worship and faith, not only of Islamic but also pertaining to Earth origins, since Eridu is the navel of the planet as well as its original name. Now Saturn is in midst of Cancer constellation in transit with Jupiter. This is a strong symptom of dislodging. Refugees come as result of Moon in Auriga but past the Stargate and with Mars on May 1st, someone shoots at the exiled. The Saturn Jupiter conjunction happens around Jun 15th 2006, therefore major politic upheaval is predicted for mid June 2006. *A precise astronomic calculus for the conjunction is pending along with special maps.*
2. Mars in transit opposes the bombing Mars on May 1st 2006. We take it as a strange coincidence with our darkest doubts for the date. Saturn is in minor aspect with Pluto at the same time. The bombing map is Saturn Pluto sensitive. We take the reader knows that Saturn Pluto are about massacre even in minor aspects such as the semi-square. *Mars will strike a couple of days before May 1st while Saturn Pluto aspects require refined calculus. The focal date however remains May 1st.*
